

StreakStoppers

Frequently Asked Questions

Q. How do the StreakStoppers work?

Streak Stoppers are installed at drainage points on your boat to channel the water out and away and keep water run-off from going down your hull and forming black streaks.

Q. How do I install the StreakStoppers?

Streak Stoppers are installed under your rub rail and screw into place.

Q. What are the StreakStoppers made of?

Streak Stoppers are made of clear, UV stabilized plastic.

Q. How do the StreakStoppers promote clean boating?

There should be no reason to use chemical based cleaners to clean black streaks off your hull because the Streak Stoppers will prevent the unsightly build up of water run-off.
